

Hypertension Case Finding Service Support Guide

This guide is designed to give you full details and information on the [Hypertension Case-Finding Service](#). We have selected some specific links below for you to use and to support you and your pharmacy teams in delivering the service to patients.

All information and supporting documents can be found on the main [CPE webpage](#).

Service specification and setup

[Service specification](#)

[Service specification Annex A – Blood pressure check process flowchart](#)

[Service specification Annex B – Guidance on clinic blood pressure check](#)

[Service specification Annex C – Clinic BP flowchart](#)

[Service specification Annex D – ABPM flowchart](#)

[Service Directions & Determination](#) (published September 2021)

[Pharmacy owner implementation checklist](#) (new provider)

[Pharmacy owner checklist](#) (existing provider)

Pharmacies will have their IT systems in place, it is advised that all staff have read the relevant SOP and support documents for the relevant IT system being used. For any IT support please refer to your IT provider help lines or line manager.

ABPM provision

Where a patient is identified as having high blood pressure (140/90mmHg or higher, but lower than 180/120mmHg), prompt provision of ABPM will be dependent on the availability of an ABPM device. Should the patient decline ABPM through the pharmacy, they should be referred to their general practice or another appropriate local pathway.

A leaflet that can be used to provide patients, relatives, or carers with information about ABPM and what is involved is available.
